Mission and Vision

OUR MISSION

To create **intuitive experiences** for users through **integrated** hardware, software, and services.

OUR VISION

To help people **realize their productivity and creativity** through **bold technological innovation**.

OUR SUCCESS INDICATORS

User adoption: Grow Number of Active Users across devices by +25% by 2030, from 130M in 2025.

Revenue mix: Increase software contribution to overall revenue from 25% in 2025 to 35% in 2030*.

Customer engagement: Increase average revenue per user (ARPU) by +30% by 2030, from $590 in 2025.

** Relying solely on hardware growth is limiting. Better software creates better customer experiences and consequential more spend in hardware in the long run.*

Target Customers and Needs

Pear’s Current Target Customers

Creatives and Makers

Who need powerful, intuitive tools that support design, content creation, and experimentation without friction.

Working Professionals

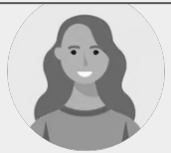
Who depend on seamless, multi-device workflows to stay productive at home, in the office, and on the go.

Leisure Users

Who want beautiful, reliable products that “just work” across entertainment, communication, and everyday tasks.

Other Segments

Construction Workers



Auto Body + Repair

Farmers & Agriculture

We evaluated profiles across industries and lifestyles. The customers who need Pear most are those whose creativity, productivity, or daily routine demands a solution where software and hardware merge together.

	Creatives and Makers	Working Professionals	Leisure Users
Gen Z (15-24)	Students and creators-in-training, practicing their craft	Early-career hustlers juggling side projects	Social media-native, trend-driven casual creators
Millennials (25-39)	Freelancers and indie creators monetizing their craft	Mid-level managers optimizing personal productivity	Weekend hobbyists balancing family and personal interests
Gen X (40+)	Established makers with niche audiences or small studios	Senior professionals streamlining complex workflows	Retirees or empty-nesters rediscovering creative outlets

We conducted user interviews to better understand their needs and goals

Creatives and Makers	Working Professionals	Leisure Users
 **TAM:** $64B **SAM:** $32B	 **TAM:** $112B **SAM:** $28B	 **TAM:** $77B **SAM:** $22.4B

91% of creatives and makers struggle with **learning new creative tools efficiently**, of which 64% young professionals (18–34) navigating early-career skill building.

57% of working professionals report **productivity loss** when switching between new workplace tools, of which 58% are early-to mid-career employees under 40.

52% of leisure users find **new apps** unintuitive at first use, of which 42% are Gen X seeking seamless experiences.

*Based on responses from 43 user interviews across all segments

THE PROBLEM

Entering and mid-career professionals struggle to learn new tools, often **losing time and context** when **switching between learning and doing**.

We chose to focus on the user group facing the greatest friction pain point first

Creatives and Makers (15-39)

Gen Zs entering the workforce and Professionals Reskilling

Largest size opportunity: ~$32B Market Size.

Largest pain point: Learning creators (new/reskilling professionals) **lose ~4 hours of productivity time per week** toggling between industry tools.

Alignment to Mission: Creatives require searching, switching, and interpretation, which breaks creative flow and prevents users from completing tasks or building skills.

** Source: Adobe Research Report*

Creatives can be further segmented into 5 distinct personas

Motion Makers

Psychographic: Perfectionist but paralyzed by deep UIs

From: CreativePro – "Paralyzed by Perfectionism? You Need the Imperfectionist Manifesto!"

Visual Designers

Psychographic: Self-taught, users who wants pro output without learning theory

From: WiFiTalents – "Graphic Design Industry Statistics" (72% of designers are self-taught)

3D Builders

Psychographic: High technical tolerance, but arcane UIs create constant friction

From: Blender Survey 2025 – User feedback results (UI clutter, too many clicks)

Social Creators

Psychographic: Speed > perfection; stuck when trending effects have no name

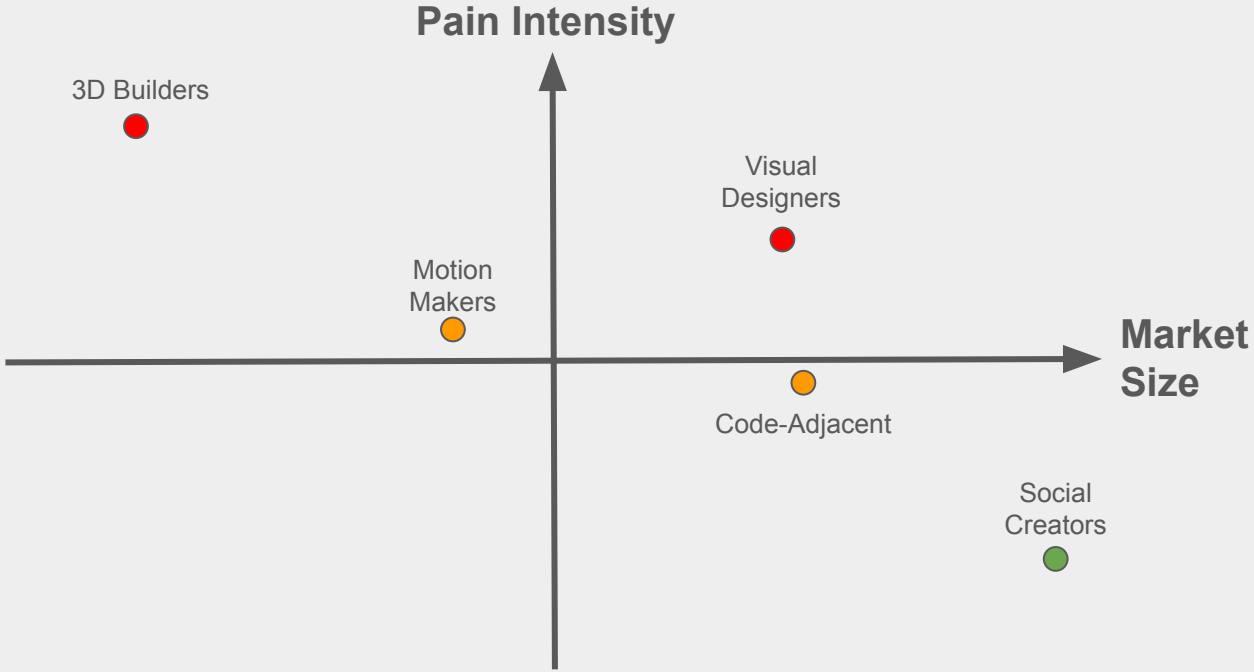
From: MBO Partners – "Creator Economy Trends Report 2024" (46% say it's hard to succeed; burnout from constant content demands)

Code-Adjacent

Psychographic: Confident in code, lost in design tools, hates tutorials

From: Medium / Alina Bezchotnikova – "Why Developer Tools Are a UX Nightmare"

Creatives segmented by market size and pain intensity reveal a clear priority



Visual Designers	13M+ Users, High Pain
Motion Makers	7.3M Editors, Medium Pain
Code-Adjacent	47M Developers, Medium Pain
3D Builders	3M+ Users, High Pain
Social Creators	207M Creators, Low Pain

*Market size axis: 13M Figma MAUs + 75% of UI/UX designers using Figma, $52.5B graphic design market
*Pain intensity axis: daily tool usage, multi-tool switching friction, no dominant AI solution, update-driven workflow invalidation

Visual Designers represent our highest-value, highest-fit opportunity

Visual Designers (15-39)

Gen Zs entering the workforce and Professionals Reskilling

Large Growing Market Size: UX/visual design jobs are projected to **grow 23%** by 2031.

Large Pain Point: **70% of creatives** cite collaboration and **workflow friction as their #1 pain point**, costing **$11,000+ per designer per year** context switching between tools.

Alignment to Vision: **High-frequency tool usage** makes seamless integration, driving mission and vision.

Meet Jordan!

Jordan

Age: 22
Occupation: UI/UX
Exp: 1 year

Daily Routine:

- Opens Figma 5+ times per day
- Opens Photoshop/Illustrator/DaVinci several times per week
- Spends ~20% of work sessions searching how-tos*

Psychographically, Jordan…

- Studied graphic design in college, is upset by the learning curves of different design platforms, and is frustrated by updates that invalidate his workflow.

> *"I need something that sees what I'm looking at and tells me exactly what to do. Please no more tutorials"*

** Source: Primary Users Interview*

Problem Definition and Significance

We explored the pain points involved in our current user journey

		User Insights	Jobs-to-be-done
1	**Vocabulary gap**	**57%** struggle to search effectively as they don't know the correct action terminology.	Find and execute the right tool action using plain, descriptive language
2	**Version/update fragmentation**	**62%** report that UI changes make existing tutorials partially unusable.	Access instructions that automatically adapt to software updates
3	**Tutorial-to-screen mismatch**	**67%** of respondents report tutorials don't match exact tool layout, causing friction.	Match guidance to my exact tool version and screen layout in real time
4	**Discoverability/ unknown unknowns**	**72%** struggle to find relevant features as they "don't know what they don't know."	Surface relevant features and shortcuts before I know to look for them
5	**Context-switching breaks flow**	**76%** say leaving their creative workspace to search for help disrupts focus and quality.	Complete complex tasks without ever leaving my creative workspace

*Based on responses from 16 user interviews for Visual Designers

We explored the pain points involved in our current user journey

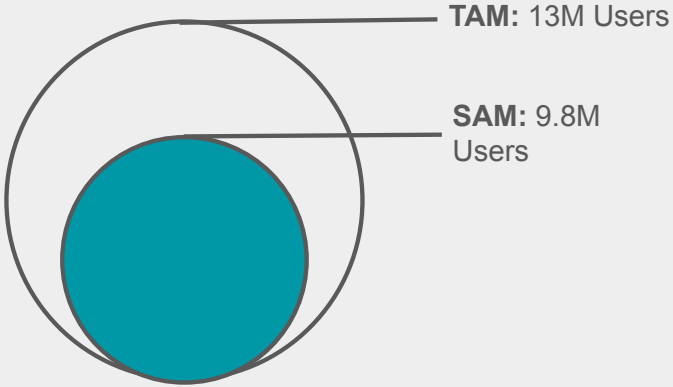
		User Insights	Jobs-to-be-done
1	**Vocabulary gap**	**57%** struggle to search effectively as they don't know the correct action terminology.	Find and execute the right tool action using plain, descriptive language
2	**Version/update fragmentation**	**62%** report that UI changes make existing tutorials partially unusable.	Access instructions that automatically adapt to software updates
3	**Tutorial-to-screen mismatch**	**67%** of respondents report tutorials don't match exact tool layout, causing friction.	Match guidance to my exact tool version and screen layout in real time
4	**Discoverability/ unknown unknowns**	**72%** struggle to find relevant features as they "don't know what they don't know."	Surface relevant features and shortcuts before I know to look for them
5	**Context-switching breaks flow**	**76%** say leaving their creative workspace to search for help disrupts focus and quality.	Complete complex tasks without ever leaving my creative workspace

*Based on responses from 16 user interviews for Visual Designers

Context-Switching represents the largest user pain point

Context switching refers to shifting our attention between different tasks, apps, or projects:

Market for Context Switching as Pain Point in Visual Designers



76%	of visual designers say leaving their creative workspace to search for help **disrupts focus and quality.**
10-15	The average creative team uses **between 10-15 tools** to deliver a single project, of which **70% are not fully mastered** yet.
~20 mins	Visual designers **lose ~20 minutes every time** they lose focus after an interruption.

*Based on responses from 16 user interviews for Visual Designer and Adobe Report

OUR FOCUS

Context-switching between **design tools and tutorials for using them** represents users' largest barrier and has most impact on disrupting people's workflows*.

A **device-wide guidance system** eliminates this entirely, and directly propels Pear Co.'s **hardware-focused advantage**.

*And aligns with mission and vision by eliminating friction for users.

Product and Solution: PearNavigator

Solutions

- Pear Navigator
- Tutorial Version Translator
- Vision Overlay Tutor
- SkillMap
- Workflow Recipes

RICE framework prioritizes PearNavigator

	Reach (M)	Impact (1-5)	Confidence (%)	Effort (Time to project completion)	RICE Score
1. PearNavigator (PearPad integrated)	18M	5	75%	7 months	9.6
2. Vision Overlay Tutor (PearLens integrated)	3M	5	60% (Due to adoption)	12 months	0.75
3. Workflow Recipes	4.5M	3	60% (Due to community)	4 months	2.02
4. SkillMap	7.5M	4	70%	5 months	4.2
5. Tutorial Version Translator	7.5M	3	70%	5 months	3.15

Based on RICE framework, PearNavigator scores highest in priority (+ eliminates context-switching pain point, differentiates from competitors (eg. Apple), and provides scalable USP).

*Assumptions: PearPad # Users: 35M, 50% creatives, PearLens: 10M, 30% creatives, Pear Desk: 15M, 30% creatives, PearCloud: 15M, 50% creatives.

PearNavigator - Your First Painting!

Core Features

Check it out!

1. **Reads Your Screen**
    a. Screenshots + Voice Prompts user input
2. **Understands your task** (Orchestrator)
    a. OCR (Tesseract) + Vision Model (OWL-ViT) to dissect image
    b. VLM: LLaVA + Mistral interprets image data
    c. LLM: Llama inference finds next steps
3. **Step-by-step Guidance** (Natively Integrated Overlay)
    a. Highlights + labels next steps on-screen

Feedback & Improvements

3 Main Value Props & *MVP -> Final Project* Improvements

(1) Context-Continuous - Applicable to any workflow

(a) Screenshot + Inference

(2) Natively Integrated Guidance

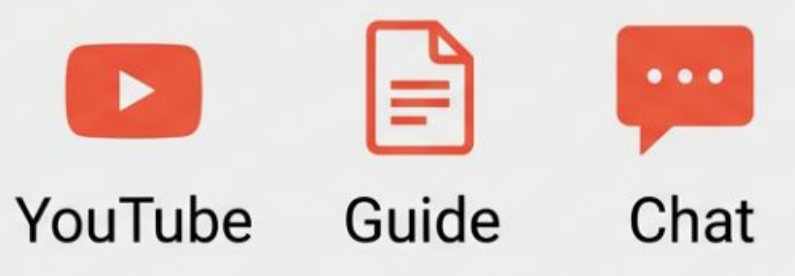
(a) Overlay Label + Highlight

(3) Learning By Doing

(a) Tap/Complete Step to Advance

(1) Context-Continuous

Screenshot + Inference



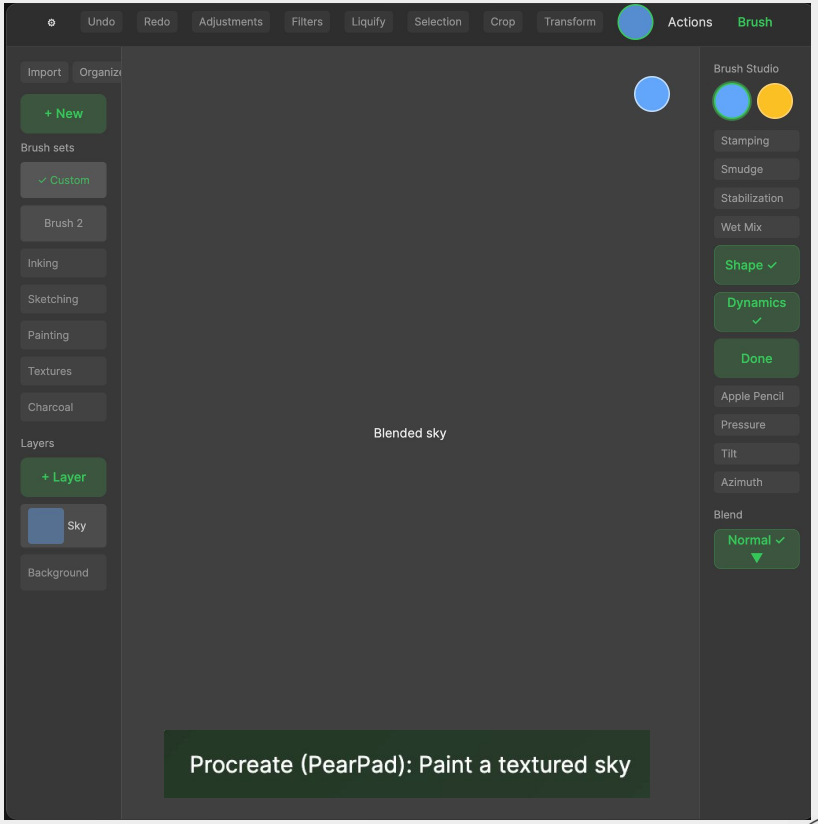
Outdated UIs, Wrong tasks

Inference

MVP: Avg. 30.4s response time

↓

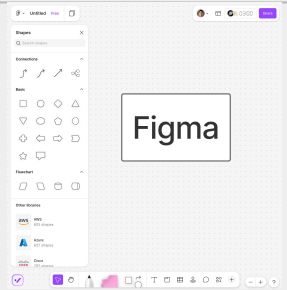
Current: Avg. 17.5s response time

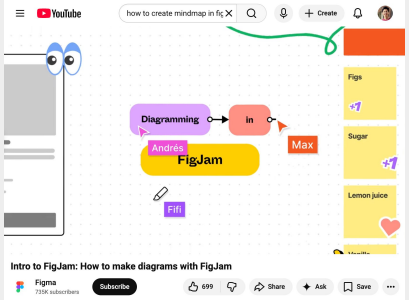


Always current, Exact workflow

(2) Integrated Guidance

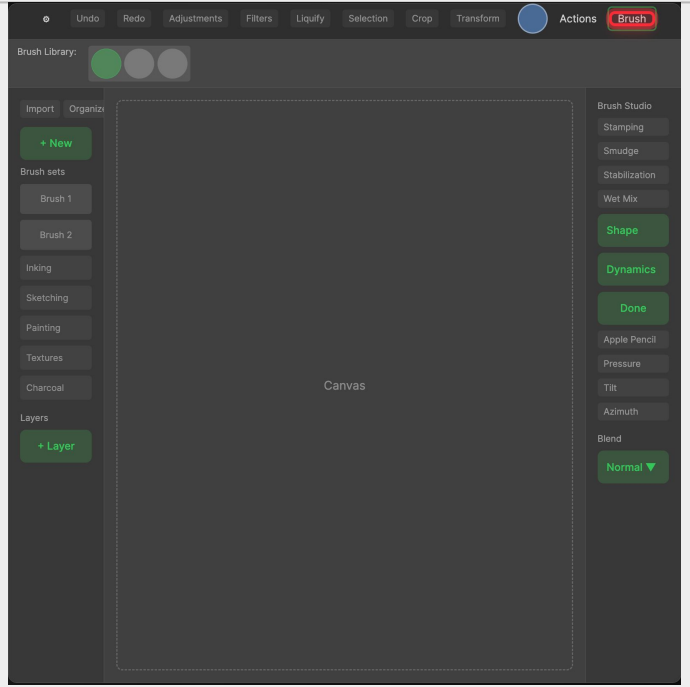
Overlay Label + Highlight





Mapping words to action

Constant window hopping



MVP: Text-only steps (18.2s /step)

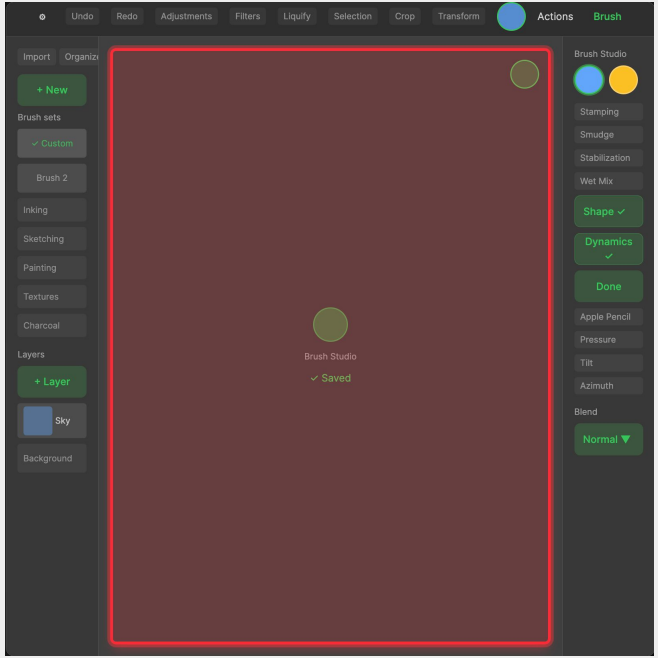
Next step overlay highlight (10.8s /step)

(3) Learning By Doing

YouTube Guide Chat

Passive learning

Tap-to-Advance



MVP: “Next Step” Button

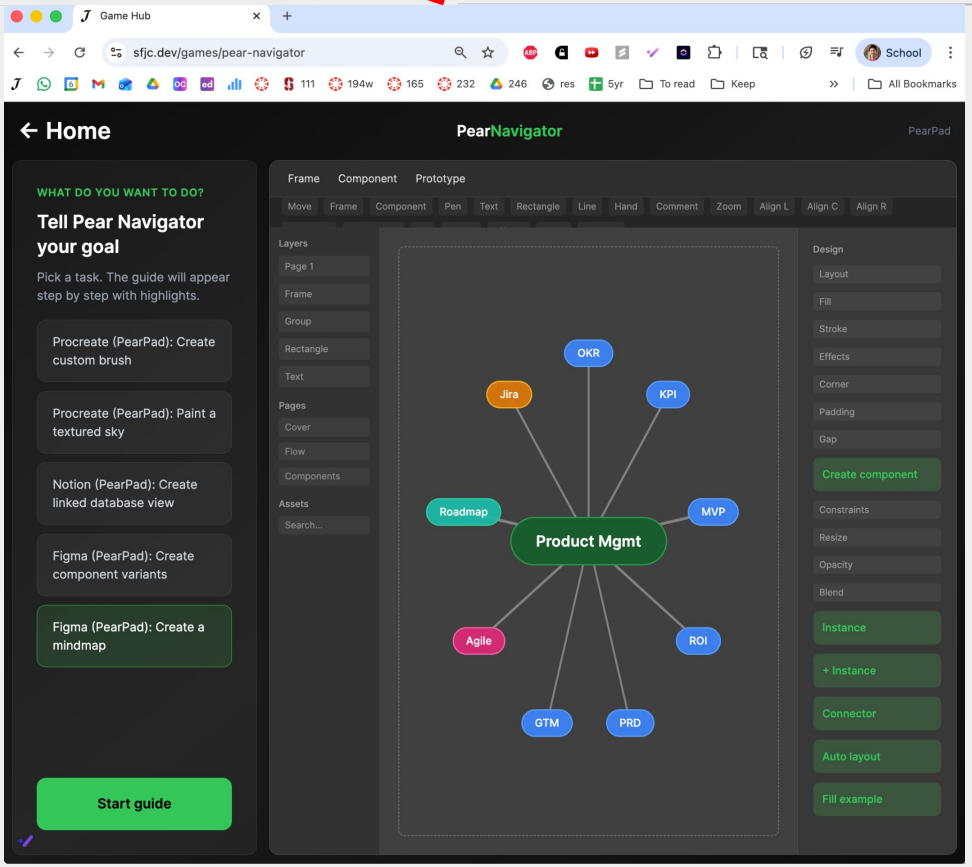
Leverages Pear Ecosystem



Go-To-Market Strategy

Launch Plan

Channels	Method
Primary - *35M users* - **In-product (PearPad)**	PearNavigator ships as a system feature. No separate install (integrated native solution) to maximize accessibility
Cross-selling - **Pear Ecosystem - *130M*** (PearCloud, Pear Desk)	Promoted across Pear ecosystem devices, OS, and cloud. Notification of updated new features
Creative Partnerships - Influencers, Youtube, Reddit - Enterprise (Figma, Adobe, Canva)	Short demos. Influencer content: “How PearNavigator Revolutionized My Work”. Forum engagement Official partnership with designer tools (Figma, Canva, etc.). Forum marketing/engagement

Execution Plan Moving Forward (Best Estimates)

Weeks 1-4

Validation / Alpha Tests

Deploy current MVP to 50+ Power Users

Goal: >85% suggestion acceptance

Weeks 5-8

Model Tuning

Retrain Edge AI on real-time user data

Goal: Reduce inference latency to <5 seconds

Months 3-4

Scaling / Beta Tests

Beta phase rollout and further UX testing

Goal: >60% retention rate after 2 weeks

Month 5

Launch!!!

PearNav launch

Goal: >20% adoption rate within first 30 days

Months 6+

AI Automation

AI Automation of tasks w/o user interaction

Goal: Shift from tool instruction to agentic

Post-Launch Impact + Target Metrics

Iterative weekly metric review

- ✓ Adoption: % of eligible PearPad creative software users who make at least 1 workflow request; Average # of workflow help requests a week
  - Ex: Adoption >20% in 30 days
- ✓ Outcomes: % of sessions where user gives up on PearNavigator for external help; % of users who complete the same task later without PearNavigator
  - Ex: Competing alternatives use <15%
- ✓ Retention: % of users who adopted PearNavigator who make at least 1 *repeat* workflow request within set windows (1 week, month, etc.)
  - Ex: Retention >60% at 2 weeks

Business Impact

PearNavigator creates opportunities for the company

Customers

PearNavigator targets **30-40% of new users who churn in first 90 days** due to feature overwhelm, projected to **improve retention by ~20-25%** and **boost conversion by ~15%**, translating to thousands of additional retained users annually and meaningful LTV growth.

Strategic Value

Strengthens Pear's ecosystem differentiation in saturated market, increases **ecosystem retention** by reducing friction, and **creates multi-product growth potential** by extending into **PearLens** and subscription services (eg. **PearCreate+**) that we believe could capture between **$120-180 additional ARR per retained user**.

Vision Alignment

Delivers an **intuitive and seamless solution** to context-switching friction, aligning with Mission and Vision.

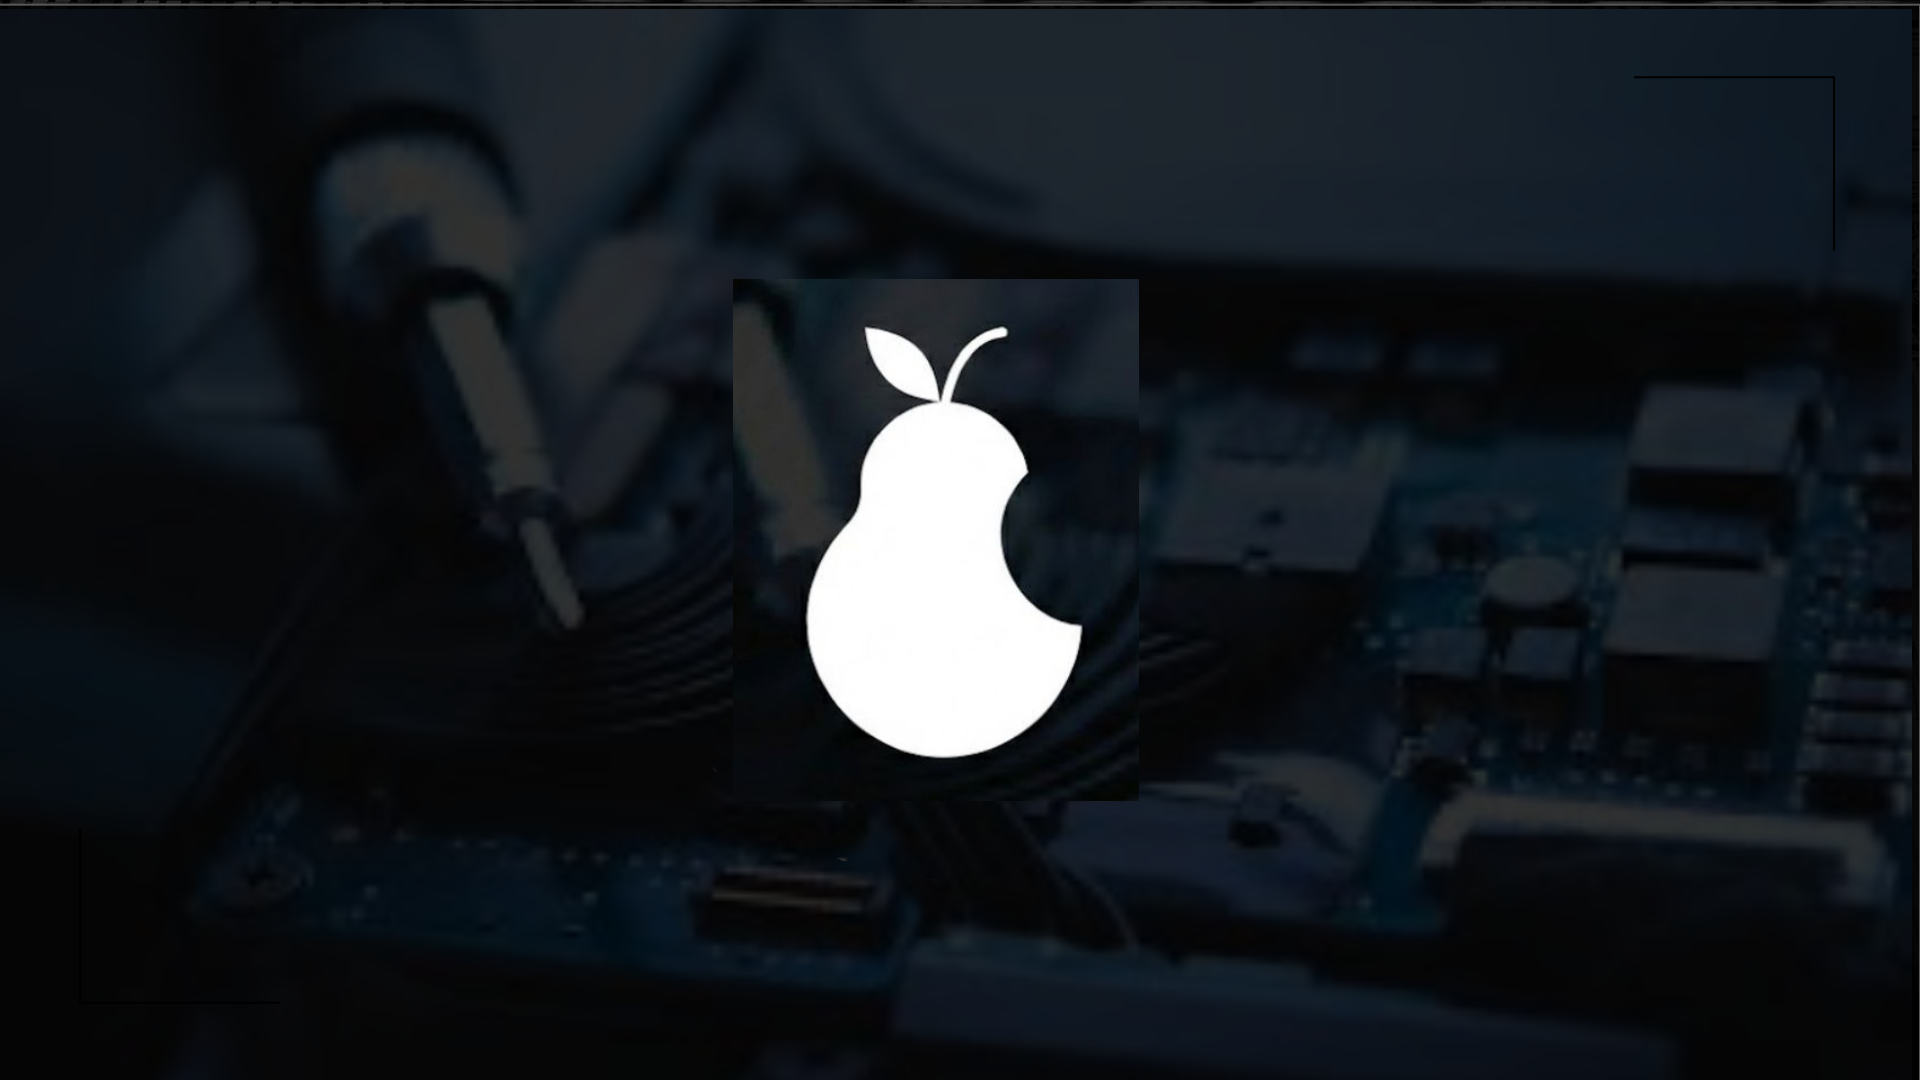
Required Resources

Required Resources (Best Estimates)

Funding **~$80K–120K through launch**	- Cloud/API ~$15–25K - Creatives Software Tools + PearPads testing ~$20–30K - Alpha/Beta test funding (50+ users) ~$5–10K - Contingency ~$40–55K
Tools - **Reliable inference** - **On-device testing**	- Vision/LLM APIs (OWL-ViT, Llava + Mistral VLM, Llama LLM) - OCR (Tesseract) - Creatives Software Tools (Figma, Photoshop) + PearPads - Data Analytics Tools (Event-based and A/B testing)
Team Roles **~8 FTE**	- 2 Product - 3 Engineering (ML + overlay + infra) - 2 Design - 1 Data Analytics

Partnerships
- **Product awareness**
- **Education (forums/guides)**
- **Test Recruitment**
	- 3+ app/ecosystem partnerships (Figma, Adobe, Canva)
	- 5+ communities for alpha/beta recruitment / super users
	  - Influencer/Creator partnerships
	  - Reddit forum management

Lessons Learned

Lessons Learned


- ☑ **Mission and Vision guide decisions:** Decision making process is driven by *concrete* mission and vision alignment *(s/o corporate mentor Mischa!)*.
- ☑ **User segmentation ensure targeted problem is solved**: Making sure each user segment is MECE ensures the solutions solves a specific audience pain point.
- ☑ **Deep understanding of pain points drives success**: Driving decisions based on user interviews and market research helps distinguish between signal and noise and drives informed decisions.
- ☑ **A well-defined MVP and Go-To-Market Strategy ensures clear next steps**: These ensure moving forward with clarity and direction
